Anyone knows what is that?? A: If you want to understand a bit about regexps, you can try reading this book: [The Nature of Computation: An Introduction to the Theory of Algorithms](#) and its free online version. Another option is the wikipedia entry for regexps. Dutch investigators are investigating how a missing plane was allowed to fly despite knowledge that a powerful bomb was on board. The GMRNeutralité aircraft vanished over the North Sea near the island of Ameland in Holland on Wednesday. An accident report by Dutch investigators said the plane “was only discovered in the vicinity of the area, without any of the crew or passengers having been found”. It is believed the plane was hijacked and flown to the area, where it was kept in a secret hangar for several hours and then flown to Turkey. Local media reported that it landed in the province of Hatay on the border with Syria. Investigators from the Joint Agency Investigation Team (JIT) said in a statement on Thursday that an examination of the plane confirmed a “powerful explosive device” was loaded on board. Dutch authorities said the aim of

the investigation was to “determine whether the aircraft was hijacked”. They did not say if they were looking for the pilot or the co-pilot, but said he was “a Dutch national”. The statement said the plane was last detected at 06:34 GMT, 6.5 hours before it disappeared. “No radar signals of the aircraft were registered at that time, and the JIT wishes to establish the reasons for this,” it added. The JIT said a surface search and a separate search by a team of Dutch Royal Marines were underway. At least 2,000 people have been asked to help in the search, it added.

Aerial footage shows the wreckage of a missing flight, which disappeared over the North Sea near the Dutch island of Ameland. Dutch authorities believe the plane was hijacked and flown to the area, where it was kept in a secret hangar for several hours and then flown to Turkey. Q: Elixir, Dict with Custom Types I'm trying to create a dict in Elixir with some custom structs, I want a struct to be able to map to the keys of the dict e.g. `%MyDict{ :name => "user1" :city => "London" }` should be a valid key e.g. `%MyDict{ :name => "user2" :city => "Manchester" }` should not be a valid key I tried using an Enum as the key but it doesn't map correctly. e.g. `#Map with Enum as the key`

```
iex(1)> dict = %MyDict{ ...(1)> :name => "user1",  
...(1)> :city => "London" ...(1)> }  
%MyDict{ ...(1)> :name => "user2", ...(1)> 2d92ce491b
```
