Have you heard of an app store? What is it? Is it the same thing as an online market place where there are apps for just about anything, or is it something different? Apps are free and/or cost money, depending on the app. An app store is where app developers pay money to have their apps available to download and use. Many big name companies such as Apple have app stores, or are building their own app stores. It is a good idea for brands to build their own app stores as this helps to create strong engagement with their brand. Why do we need an app store? It is a great opportunity for brands to tap into the large and growing market of mobile app users. People use apps for almost everything. They are great for mobile shopping, and they are also being used as a replacement for web browsers. Apps are being used more and more, and this is only going to increase in the future. We have seen this with Google Android, where apps have surpassed websites as the number one way people use their mobile devices. Apps also give users the opportunity to shop with brands. This means that a brand is promoting themselves, and can reach out to customers with a single touch. It is a more intimate form of marketing, and it has a higher ROI than other forms of marketing. App stores give developers the opportunity to create apps for their own brands, or to work with others. In the past, app developers would have had to create their own app to sell products, but in the app store era, they can use an app store to create apps, and then promote them on their own. It is also great for developers to put their apps in the app store, so their apps get to more people. Shopping for apps on the app store When someone is looking for an app in their app store, they might see a
