They all have different

browser names; however, when I open the second browser it clears all previous commands. How can I configure Selenium to run in non-interactive mode so that it won't clear previous commands on a new browser? I already tried the "--no-new-session" option, the "--ignore-brwser-check" and the "--new-session" options, but it doesn't seem to work. I'm using the following code to open the browser: option_fields = brow ser.find_elements_by_id('browser-name') for option_field in option_fields: option_field.click()

browser.get(option_field.text) And this code to start the tests and stop the browser: @dataspec.feature('Feature: Test Feature') @dataspec.scenario('Scenario: Test Scenario') def test_feature(): browser = webdriver.Firefox() browser.get(url) browser.close() # Open other browser option_fields = browser.find_elements_by_id('browser-name') for option_field in option_fields:

A metasurface, a 2D array of subwavelength scatterers, can

be used to control electromagnetic waves in space, inspired by the structure of the wing of a butterfly. In the visible region, we realized a real-time metasurface that generates an electric field at the location of a target plane wave by dynamically loading fixed scatterers in a frequency-selective manner./*==========

atoms and one deuterium. It has a chemical formula of H2O—D. It has the same chemical properties as water, but with an additional neutron replacing an atom of hydrogen. The percentage of deuterium that has been replaced is equal to the atomic weight of the deuterium divided by the atomic weight of the hydrogen; for water this is 0.062%. (If the deuterium replaced another isot ba244e880a
