to make video effects, transitions,

layers, and background music.

Your PC & Devices Free.Q: How to obtain duplicate rows with SQL in Postgres? I would like to delete multiple duplicate rows in one query but I can't succeed. I tried to use row numbers or dense_rank or any other way I found in internet, but I didn't succeed. For example, I have a table that looks like this.

id	tag
1	
1	[film1, visual effects1]
2	
1	[film1]
3	[film2, visual effects1, visual effects2]
4	[visual

effects1] 5 | [film1] 6 | [film2,
visual effects1, visual effects2] 7
| [visual effects1] So, I would like
to select all the rows of id 1-5,
6-5, and 7-5 (for example). I tried
this, but it doesn't return me all
the rows I want. **SELECT id
FROM myTable GROUP BY id
HAVING COUNT(*) > 1** A: You
can use window functions - here
is an example: **SELECT id
FROM (SELECT id, COUNT(*)
over () as cnt FROM myTable
GROUP BY id HAVING cnt > 1**

) as t WHERE cnt = 2
