AutoCAD is one of the most widely used CAD software in the world. The 2013 report on Global CAD Market - forecast through 2021 commissioned by Allied Market Research, estimates the overall market value of CAD and related software and services at \$17.46 billion in 2013, and is projected to reach \$24.46 billion by 2018. According to the same report, the top five CAD software vendors globally were Autodesk, AEC CAD, Pro/ENGINEER, Alias/Wavefront and Inventor/Solid Edge. Together, these vendors accounted for a market value of \$5.16 billion in 2013. Autodesk's 2014 revenues from CAD and related software and services were \$1.94 billion, representing 41 percent of its overall revenues of \$3.63 billion. Also in 2014, Autodesk acquired the AEC CAD company. Later that year, it also acquired Maxwell Technologies, adding DWG (formerly CorelDraw) and Inventor software to its product line.

History Autodesk History The history of AutoCAD started in 1962 when the Autodesk Corporation was founded by five principals, including Douglas Engelbart, inventor of the world's first interactive computing system; and Max Palevsky, a programmer and consultant to United Airlines. In the early years of the company, Engelbart and Palevsky recruited several employees from the Stanford Research Institute (SRI) - including Mike Weik, Phil Simon, Alan Kay, Mike Lesk, and Jim Mitchell - to work on the Engelbart Augmentation Research Center project in Menlo Park, CA. In December 1968, Engelbart, Palevsky and Weik established "Project Genie", a prototype interactive computing system, in a graduate student lab at SRI. "Project Genie" was the

world's first fully interactive computing system. In December 1969, Engelbart and Palevsky published their paper on "The Augmentation of Human Intellect", which introduced the term "augmented intelligence" and proposed the idea of "augmented reality." In January 1970, Engelbart and Palevsky founded the "International Computer-Human Interaction Center (ICHIC)" in San Francisco. ICHIC was created to address issues of communication between computers and humans. In November 1970, the project was renamed "Augmenting Human Intellect through Computer-Assisted Feedback and Training Techniques" (ACHIC), and Engel

When the cloth is stretched and then joined to another such cloth, a seam is created. This creates the possibility that the cloth at the seam can be stretched or distort or sag at the seam. In the past, however, such seams have been mechanically reinforced and reinforced by stitching with metallic staples or by sewing through holes in the fabric. The stitching creates a seam which is thicker and which is difficult to work with when making work pieces of clothing or other fabric goods. A seam that is thicker is more difficult to join, and it has a tendency to become distorted or lose its integrity over time. Stretchable, durable woven cloth with internal tension and reinforcement is also known in the prior art. In a typical prior art construction, reinforcing fibers are used to enhance the tension in a woven fabric, as described in U.S. Pat. No. 5,965,508. The fabric of the '508 patent also may be made stretchable by a special composition. However, the '508 patent includes only one seam, as do the other prior art constructions. As a result, the seam is made thicker or thicker and/or more difficult to work with, even with reinforcement. A need exists for a superior woven fabric for many uses, such as clothing and the like. A woven fabric is needed that is durable, strong and stretchable. A stretchable woven fabric with reinforcing internal fibers is needed that also has a seam that is thin or narrow, is mechanically strong, and that does not distort or sag over time.
