DoneEx VbaCompiler for Excel Free Download is a relatively straightforward application designed to help you turn the VBA code of Excel workbooks and add-ins into binary code. Once the code has been compiled, it cannot be copied or recovered, providing protection against piracy. It is fairly simple to use, as the application requires minimal user input, and it also comes with detailed documentation. VBA

compiler for Excel workbooks and add-ins DoneEx VbaCompiler for Excel works by converting the original VBA code into C-code, which is then compiled into a Windows DLL file. Once the process has been completed, the application removes the VBA code from the file and adds external DLL function calls. The original file is not modified in any way, as the program only works with a copy of the document, but it is still recommended to create a backup before starting a project. Follow a

few simple steps to ensure everything goes smoothly

Naturally, Microsoft Office needs to be installed on your computer in order to process the source files. You also need to enable the "Trust access to the VBA project object model" option in Excel and remove any passwords from files you wish to compile. You should find the rest of the process to be more or less self-explanatory, but you can also consult the included documentation if you run into any issues. When the job is done, the

application can even open the output folder. Functional and rather simplistic user interface As far as the UI is concerned, there isn't too much to be said. The program features a minimalistic layout, and all the main functions are easily accessible from the main window. All in all, DoneEx VbaCompiler for Excel is a useful tool that enables you to convert VBA code from Excel files into binary code and export it to native DLL files. It is not at all difficult to use, thanks to the included

documentation, and it gets the job done quickly and efficiently.]]>
