

IntelliBrightness is a small, easy to use utility designed to use the camera to adjust the monitor's brightness. This tool is particular useful for laptops. Features: • Adjust your monitor's brightness according to your environment. • Monitor your children. • Read and write data to/from your camera. • It has a simple interface. • The configuration file can be shared among users. I know this is a really common one and I have seen it posted in the forums but no one has posted a 'how to' so I thought I would give it a go. The problem with it is that this program seems to freeze occasionally (and the crash only happens occasionally) but the progress dialog that comes up when it freezes stays stuck on "Checking for updates...". I then have to ctrl+alt+delete and restart the pc to get it working again. I'm using the latest version (1.4.6) and I have rebooted in between to no effect. Does anyone have any advice on how to fix this? Bexhill is the one place that has a 'million takers', and there are many more places that could be supplied, a bit like all those places you see in the yellow pages advertising 'one-man bands' Moved it here in case it helps someone else too. I am using the v1.4.6. I just used the installer and it installed ok. It just says "Checking for updates..." and then sits there. No updates available and then its ok. I have this problem all the time. Does it say anything else? In the past, my workaround has been to just restart the computer. I haven't had any problems since I started using ctrl+alt+del to restart the computer. I tried it again this morning and I got the same problem. I just tried to start it up again (with this new installation) and it locked up my desktop - there were no crash reports or anything. EDIT: just noticed that it said "Starting background check for updates..." when it locked up. I have this problem all the time. Does it say anything else? In the past, my workaround has been to just restart the computer. I haven't had any problems since I started using ctrl+alt+del to restart the computer. I tried it again this morning and I got

KeyMacro is a convenient macro application for video editing, special effects creation and special filming. It consists of a video editor, a utility for creating special effects, a tool for creating special video and a program for slow motion shooting. KeyMacro allows to add a pre-defined sequence of hotkeys to the toolbars of various applications, to reduce number of operations for executing commands by pressing several keys at once. **IMPORTANT:** KeyMacro is an integrated part of the program and has to be installed after it is purchased. Limitations: 1. The size of saved macros is limited. No more than 64 hotkeys. 2. KeyMacro does not support hotkey switching. 3. KeyMacro does not support loading macros from the computer disk. 4. Program key combinations with the same key are not supported. Features: - You can add hotkeys to the start of, middle of or at the end of the program window. - You can add hotkeys to any application, to the shell of any task, to Internet Explorer, to your web browser, to an HTML editor, to a mail client, etc. - You can use predefined hotkeys or you can create your own hotkey combinations. - You can save macros as text files and copy them between computers. - You can add special text to macros (or insert them in various programs). - You can create special menus with macro options and embed a macro into a menu item. - You can create visual effects with built-in virtual effects. - You can add various effects to an image. - You can generate movies in a variety of formats (AVI, MP4, MPEG, etc.). - You can use this software to record slow motion (Super Macro) and to create slow motion from standard videos (Super Fast Forward). - You can use this software to create special video effects for video editing (3D World, Time Skip, Fast Forward, Slow Motion, etc.) - You can use this software to record people and to extract audio from videos. - You can save macros for repeating tasks in various programs (up to 15). - You can change the color of the font of macros. - You can change the size of the text of macros. - You can customize the menu of hotkeys and macros. - You can use macros to automate some tasks. - You can create keyboard shortcuts in any combinations. 77a5ca646e

System Requirements:

Minimum: OS: Windows 7, Vista, XP, and 2000, (Vista and XP recommended) Processor: 1.8 GHz or faster processor Memory: 1 GB RAM Graphics: Graphics card with 256 MB memory Network: Internet access Sound Card: DirectX 9 compatible sound card Storage: 2 GB available space Additional Notes: Windows 95, 98, or Me are no longer supported by this product and are no longer available for download. When installing the game on Windows XP, a service pack
