Thanks for visiting.Q: How to create an alias in google actions? So, I am trying to create alias for my google assistant to do this: Instead of 'What is the weather today?' - I would like it to give me a weather forecast in real time. So I created an action that would like this: /actions /query /weather And I added this code in the'say' response: "When I am hungry, I like to know the weather today. How are you doing today?" That works for the first line, but if I say the second - it's no change, the assistant ignores the second line. Does anyone know how to create a alias? A: The intent you defined for /weather is no longer (since 1.8.3) a realtime intent - instead, it is a "non-interactive intent". In order for that to be a realtime response, you'll need to have the same intent in your fulfillment and the corresponding request dialog. This is the example for the weather/fetch endpoint from the web developer console, taken from this post: Request Handler component: export default class WeatherHandler implements RequestHandler { static readonly intent = new Intent('Weather.Fetch'); static readonly fields = { type: 'Weather.Fetch' }; handle = async (conv, {inputs, slots}) => { return await conv.ask(Weather.Fetch.intent); }; } Fulfillment component: const weather = require('./resources/Assets.Weather.fulfillment'); WeatherHandler.intent.addFulfillment(() => weather); Alexa response handler component: class FetchResponseHandler extends RegexHandler { static handle = (conv, args) => { const match = /already executed \S+/.exec(args[0].payload); if (match 1cb139a0ed
