What's New In?

OpooSoft Snapshot allows you to create snapshots of entire disks, sectors or files. No, it doesn't create empty folders on the C: drive, and no, it doesn't mess up your data. Snapshots are like snapshots of virtual hard disks (virtual machines) in VMWare, but much more useful and flexible. Unlike VMWare, Snapshot is fully free and open source. It creates its own disk or file "snapshots" that you can then put on USB flash drives, transfer to CD-RWs, or use as USB thumbdrives or floppy disks. You can create snapshots for disk sectors, disk files or hard disk files, and you can take snapshots of whole disks or of a single sector. The program also features a complete volume browser with support for FAT12, FAT16, FAT32, UDF and NTFS files, images, hard disk partitions, logical volumes, free space, etc. Snapshot basically offers two interfaces, the semi-graphical and the windowed. The user is welcome to toggle between them, as well as between the full and the minimal interface. In the minimal mode, all operations are available, while in the full mode, only snapshot creation and management is allowed. All other operations (which can be configured from a drop-down menu) are available in the windowed mode, where only the file browser is displayed. Quite a number of configuration settings are available in the full mode (numbers, dates, etc.) as well as in the windowed mode (mounting disks, security, filtering of the file browser, synchronization of snapshots with the source file, etc.). The program is easily configurable and extremely powerful. Once you get the hang of the interface, you will probably not even realize that Snapshot is even running in the background. Snapshot is designed to work with Linux and Mac OS X as well as Windows. Support for Windows is not perfect, though. So if you are planning on trying Snapshot on Windows, make sure it's working well before using Snapshot. Snapshot is written in Java and works with Java version 5 or higher. The installation process takes about 10 minutes and creates the program's directory (by default located in Program Files) and the required JAR files. If you have any questions about Snapshot, you will probably find an answer at the The developer team is very active and fast at solving questions
