WinMend Registry Defrag Free

WinMend Registry Defrag is an easy-to-use and powerful registry defrag tool that can defrag your registry to improve system speed. Supports all major Windows OS versions, including Windows XP, Windows Vista, Windows 7, Windows 8, Windows 8.1, Windows 10, and Windows Server 2016, 2012, 2008, 2003, 2000 and NT. Speeds up your registry dramatically by defragmenting it and optimizing its files. Gives you a brief report of the registry defrag results. Cleans and restores invalid registry entries and blocks. Large Capacity and Proper Registry Optimizer Design The largest registry defrag and optimizer tool, covering most system registry files and files from windows components and programs. Cleans and restores invalid registry entries and blocks. Long History and User-friendly Interface Supports all major Windows OS versions, including Windows XP, Windows Vista, Windows 7, Windows 8, Windows 8.1, Windows 10, and Windows Server 2016, 2012, 2008, 2003, 2000 and NT. Large Capacity and Proper Registry Optimizer Design The largest registry defrag and optimizer tool, covering most system registry files and files from windows components and programs. Cleans and restores invalid registry entries and blocks. You can also access the registry files by date, size and content to find the ones that take the most space. Superior Performance Cleans and restores invalid registry entries and blocks. Analyzes your registry and automatically changes data types and data length that are not suitable for registry files. The optimization result report includes current files, deleted files and the type of data (integer, string, other types) of each file. Users can quickly identify and replace invalid data with proper types. Automatic Reboot Optimizer The fastest way to reboot your system after the defragmentation. Configurable system setting means the reboot never depends on user's actions. User-friendly configuration means no effort to set the reboot settings. Fixed the old issue that takes too long to reboot after defragmentation. Safety and Security You can define the reboot time and schedule and set the system to stop automatically. Supports most of the functions and the features of Windows. The running time of the tool is not affected by the system's memory size and speed. You can set the process priority to run after some processes. Supports Windows 8/Windows 10. Can be installed and run on Windows. Supports all major Windows OS versions, including

What's New in the WinMend Registry Defrag?

WinMend Registry Defrag is an application designed to help you improve the speed at which you access the Windows registry, by reducing its size. The interface of the application is plain and simple to navigate through. The first step that you can take is to analyze your system's registry. During this time, it is highly advised that you close all your running applications and refrain yourself from making any actions on the computer. Once the scanning job is done, you can view results which display by how much your registry can be reduced (in size and percentage), as well as the new speed of registry access, along with two "before and after" graphical representations. But you can also get an in-depth evaluation by finding out the exact parts of the registry which can be reduced in size (view the file path, initial and new size). Once you press the "Defrag" button, WinMend Registry Defrag will start making the necessary changes, after which you are required to restart your computer. The powerful tool requires a low-to-moderate amount of system resources, supports several languages and colors for the interface, and quickly analyzes and defrags the registry without freezing, crashing or displaying errors. We highly recommend WinMend Registry Defrag to all user levels. ... WinMend Registry Clean is an application designed to help you improve the speed at which you access the Windows registry, by reducing its size.
