SAM Party DJ is a reliable application that comes bundled with professional tools designed for audio mixing. Upon initiating the software, follow a quick wizard in which you can add audio files to the media library, default special effects and demo files, as well as select playback and recording audio devices. The interface may seem overwhelming to beginners, since the software is mainly developed for advanced users. SAM Party DJ includes features such as beat matching, instant song search, and album cover support. Several components are visible in the user interface: two decks, auxiliary, clock, fade control, sound effects, voice effects, voice-tracking, queue, history, playlist, and tracks in selected category, but you can also enable the option to view of video display and event log. First you have to organize music into specific categories (create them in the playlist window). Music can be added via the drag and drop method, from queue, or from other categories. Songs can be organized according to their type (from the right-click menu), and these include normal song, karaoke, station ID, promo, jingle, and advertisements. The playlist is configured by setting Playlist Rotation Rules from the Config window in File menu. If you leave the usage of ghost queue enabled, SAM Party DJ will cache the next song into its memory, thus making the loading faster. In Configuration, you can change preferences for the audio mixer pipeline, cross-fading, gap killer, playlist rotation rules, and general settings. The playlist rotation logic module is either based on web scripting, clock wheel (category rotation), or on weight. Unfortunately, the program's online help page mainly focuses on the organizational aspect of SAM Party DJ, so if you do not have basic experience in audio mixing, it will be very difficult for you to learn how to use this application. The program uses a medium amount of system resources, and it did not cause any errors during our tests. We strongly recommend SAM Party DJ to power users. I'm looking for some easy beginner puzzles that have many valid solutions, that I can show my kids or guests, so they can get the idea of how different types of puzzle logic works, and what happens if they get a very non-obvious solution. I've been playing with the logic puzzle site. I found a list of logic puzzles that were easy enough to explain to children,
