KeyMacro is a tool that allows you to create keyboard macros. KeyMacro is an all-in-one software package. It not only helps you edit and create your own keyboard macros in a few minutes, it also allows you to manage multiple macros, save macros, record macros, and export macros to text, PDF, audio, video and other formats. KeyMacro is also easy to use. It works out of the box with very little or no setup required. You just have to record your macros and make them do what you want. You can easily make a shortcut for one of your macros. KeyMacro is a tool that has been specifically designed for keyboard users. Keyboard macros, shortcuts, and hotkeys are often used as shortcuts for application functions and are a basic feature of any Windows system. KeyMacro, like any other program, gives its users the ability to create macros for the mouse too. But, the developers behind KeyMacro believe in the power of the keyboard and are proud to help you focus on what's important. They believe keyboard users should never have to waste time with their keyboard and should always have the power to quickly and easily move up and down the Windows Explorer, create documents, edit files, play games, and more. The basic keyboard macro creator is there when you first install KeyMacro. It contains the basic macro creator as well as the export options for your created macros. KeyMacro gives users the ability to make macros for the Alt key too. It comes with a built-in Alt macro creator that is both simple and fast to use. KeyMacro allows users to make their own powerful functions for their keyboards. It is a one-stop solution to all of your keyboard macro needs. ****IMPORTANT**** KeyMacro has an auto-update option. You can manually update the version of KeyMacro that you are running. You can also check the version of KeyMacro that you are running from the About KeyMacro section. Let's Start KeyMacro Steps to create a keyboard macro Enter the application, click the NEW button, and select the KEY COMMAND type (F1 to F12, ALT, CTRL, SHIFT, and others). Featured in "Just keep scrolling" This is the first of many tutorials on colour. I am sure you are familiar with the fact that light and dark colours are balanced and complementary to each other in colour theory. Take a look at this example where our "light" colour (blue) is complemented by a darker colour (red). For more on colour, you can read my previous tutorial, "How to Know What Colours to Use".
Have you ever had this feeling where you can't decide which colour to use in a project and ended up using all colours in a project and only realised later that it was all wrong? For me, this is the single biggest problem I encounter in almost every project. I try to play it safe by using colours that are good for visibility, but for that project that I am working on, I decided to use the four colour theory tools that I have learnt about over the years.
