Availability and history AutoCAD is available in a choice of three operating systems: Windows, macOS and Linux. The traditional desktop (AutoCAD LT) is available for Windows and macOS systems. AutoCAD Classic is available for macOS and Linux systems. AutoCAD Lite is available for macOS and Linux. AutoCAD Cloud is a web-based app and is available for Windows, macOS and Linux. AutoCAD 2017 was released on October 16, 2016. AutoCAD 2018 was released on March 21, 2017. The AutoCAD software was launched in 1982, for the Apple II and Microsoft DOS computers. The initial release for the Apple II used 16 KB of memory and 5 MB of disk space, and was estimated to cost between \$1,750 and \$2,250. The AutoCAD software was originally distributed as shareware, meaning it was available for a limited number of free trials. The AutoCAD LT shareware program was available until 1983. In May 1984, AutoCAD was sold as a complete software package for \$395. Sales of AutoCAD software for the Apple II continued until 1987, when Autodesk acquired the rights to distribute the software for the Apple II. The sale of the Apple II software to Autodesk happened in March 1987, and the software was relaunched as AutoCAD, with the Apple II version bundled with the new desktop version. This new version was sold for \$2,000. AutoCAD II was the first of the three AutoCAD releases to use Windows 3.1. AutoCAD LT is the only AutoCAD release not to have an AutoCAD variant named for the developer. The AutoCAD release for Windows and Macintosh systems, as well as the Web, required a 286 processor or better. The AutoCAD classic releases, which were originally available only for the Macintosh, required either an 8-MHz 68030 processor or higher. This is not to be confused with the display driver, which is the object or item in AutoCAD that is responsible for displaying graphics on the screen. In the past, graphics drivers that displayed a single type of display device (such as a VGA card) were usually sold with AutoCAD. These were standard component parts that were suitable for use with a variety of graphics adapters. However, because the industry has embraced GPUs (graphics processing units) as the main graphics processing for CAD

1. Field of the Invention This invention relates to a system for remotely monitoring the availability of a vehicle brake component. 2. Description of the Prior Art Vehicle anti-lock brake control systems typically monitor the hydraulic pressure of the vehicle's front and rear brakes to determine whether or not a brake is in need of service. Typically, these systems operate by monitoring the pressure of the brake system and actuating a brake hydraulic pressure modulator in response to a detected pressure drop below a selected pressure threshold. If the system is actuated, the modulator forces the brake fluid in the brake's master cylinder and the brake cylinder(s) to flow to the brake circuits of the wheels which are in need of service. The modulator modifies the brake system hydraulic fluid flow to the brakes to supply a "make-up" fluid flow which restores the pressure in the brake circuits to the pressure level in the master cylinder. This prevents any braking of the wheels which require pressure in the brake circuits. The actuation of the anti-lock brake system is typically initiated when the vehicle's speed has dropped below a threshold value or the vehicle's kinetic energy is less than a threshold value. Typically, the anti-lock brake system is inactive while the vehicle is at rest. Thus, the vehicle's braking system is monitored only when the vehicle is moving. In some vehicles, the vehicle's speed and the kinetic energy of the vehicle are monitored and compared to stored parameters which designate when the system should be actuated. In other vehicles, the anti-lock brake system is actuated by comparing brake system pressure to a threshold value. The actuation of the anti-lock brake system may be affected by a number of parameters, such as the vehicle's speed and/or the kinetic energy of the vehicle. It has been recognized that it would be desirable to monitor the condition of the vehicle's brake system even when the vehicle is at rest. In other words, it would be desirable to monitor the brake system regardless of whether the anti-lock brake

Peter Coles Peter Coles (born Peter Jacob Coles; 8 February 1919 – 10 March 1998) was a Scottish actor. He is best known for playing the part of Da the resident petty criminal in the television comedy series The Saint. Born in Edinburgh, Scotland, he trained at the Central School of Speech and Drama in London. During World War II, he served in the army and was demobilised in 1946. He made his stage debut in 1947. He was a lifelong supporter of Arsenal F.C. and was the only person to join in the Arsenal 'Invincibles' team of 1996/7. He made sporadic appearances in films, television and radio. He made his first appearance on The Saint in 1968. He played the role of Da until his final appearance in 1976, although he still occasionally made appearances in television and films, such as Carry On England. He was widely known for his role as Da, especially for his catchphrase "You're dead, son".
